AvaLAN Wireless, Inovus Solar and Sloan Security Group Demonstrate Innovative Autonomous Green Power Technology to Assist Homeland Security

Unique Solution for Area and Perimeter Security Integrating Solar and Wireless Technology

Los Angeles, CA., September 21, 2009 – At ASIS2009 Tradeshow in Anaheim, CA this week AvaLAN Wireless, Inovus Solar and Sloan Security Group will demonstrate a completely [wireless](#) and autonomous area and perimeter [security](#) lighting and [green solar](#) power solution for access control gates, IP surveillance cameras, and communication systems. . AvaLAN Wireless is an industry leading developer and manufacturer of long range industrial wireless radio technology. The Inovus Solar™ SmartPole™ is a self-contained outdoor light pole that utilizes solar energy to power an LED lighting system and produce long lasting, quality light off the power grid. The SmartPole™ operates off the grid – meaning all of its power is derived from the sun via the solar collector and the self-charging batteries so there is no need for traditional electricity sources to power the light pole. The Sloan Security Group is an award-winning security construction contractor that both designs and constructs critical physical security systems. All three companies have worked together to demonstrate that lighting, [IP surveillance](#) and access control can be achieved completely independent of the [grid](#) with no wires needed. Come and see the technology demonstration at the ASIS2009 tradeshow in Anaheim, CA. Sloan Security Group Booth # 3943 during the week of September 21st, 2009.

About AvaLAN Wireless Systems, Inc.

AvaLAN Wireless (“AvaLAN”) is an industry leader in the ultra long range industrial wireless Ethernet market. To date, the Company has manufactured and delivered over 25,000 of its radios to the networking, surveillance, digital signage, robotics, and access control markets. AvaLAN Wireless Systems, Inc. is headquartered near Huntsville, Alabama and can be contacted at 866-533-6216, by email at mnelson@avalanwireless.com , or by visiting www.avalanwireless.com.

About Inovus Solar

Inovus Solar™ is significantly improving the economic and environmental impact of street and area lighting through the creative use of technology solutions and business models. At Inovus Solar™, intelligent innovation is the combination of using the most compelling and relevant technologies and business models in ways that deliver world class outdoor and area lighting solutions while reducing the risk for the buyer. Inovus Solar™ is headquartered in Boise, ID and can be contacted at 208-908-0627, by email at sales@inovussolar.com, or by visiting www.inovussolar.com

About Sloan Security Group

Sloan Security Group designs and builds complex perimeter security projects that include security fencing, automated barriers, and intrusion detection systems worldwide. With experienced designers, project managers, and OSHA-safe crews, Sloan can guarantee your project will go smoothly from design through implementation. Working from Northern Alaska to South Florida, Sloan has helped safely secure facilities ranging from oil/gas facilities to the U.S./Mexico border and international airports. Sloan Security Group is headquartered in Boise, ID and can be contacted at 208.344.8379, by email at collin.sloan@sloansg.com , or by visiting www.sloansg.com
